

PRESS POWER SUPPLY TROLLEY

Feeding and loading presses

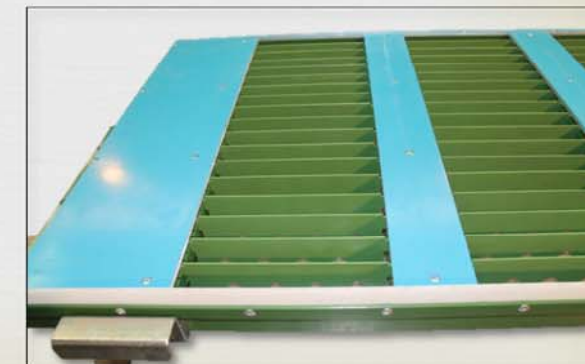

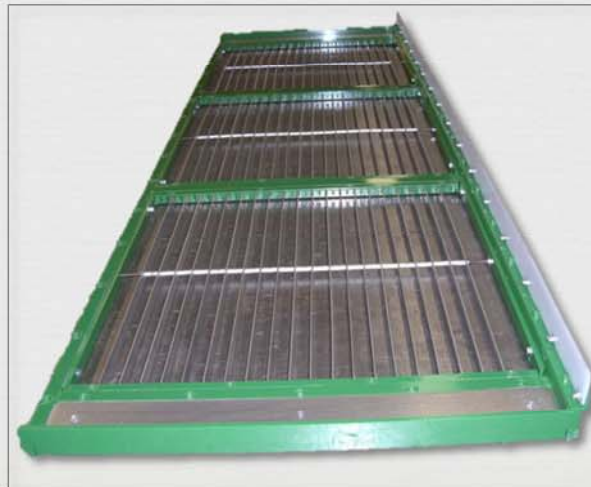

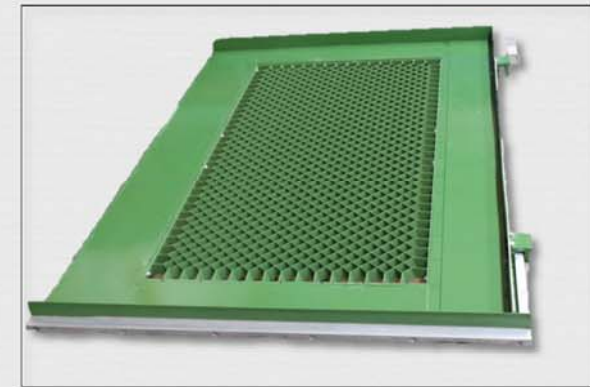

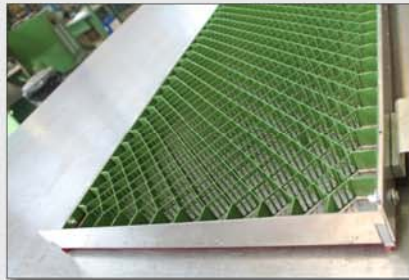

All the accessories are designed to allow extreme flexibility in production and to minimize material stocks and response times required by the market. In fact, switching from one product to another (for example from the entire double-loading mass or vice versa) requires a few hours of intervention for the replacement of some accessories, giving the pressing line a flexibility that until now can not be obtained with other solutions. In every configuration adopted, the line is able to work at maximum productivity.

➤ LINEAR TROLLEY FOR ALL TYPES OF PRESSES;

- Floating grating with wavy slats in various designs for the production of porcelain;
- Floating grate with slats for traditional production;
- Alveolate floating grille for dust loading control;
